

Make your enviro:bit check the weather

Find the pink commands in the “input” menu, and the blue ones in “basic”.

Download your code and flash it onto the micro:bit by dragging the saved file onto the micro:bit file system.

 Download

Could you make it show both results on one button press?

Challenges:

- 1) Can you make the microbit scroll the word “temperature” and then show the actual temperature?
- 2) Can you make the microbit show an icon to represent the weather, then display the readings?
- 3) Could you have one microbit measuring the weather, and sending the data to a different one connected to a display?
